Optimizing JD Edwards with IaaS

JD Edwards has been making strategic investments to support customers with optimizing their JD Edwards EnterpriseOne solution with Oracle Public Cloud as a focus. In this category, a partner is nominated for taking the lead in implementing JD Edwards Infrastructure as a Service (IAAS) on Oracle Public Cloud.

Requested information: Include a brief description of the project, customer name, their industry and where they have implemented. Add details on what the customer had on premise (release level, tools, footprint, etc) and what they have decided to implement in Cloud. If available, please provide insight into the HW and SW architecture schema (if they only had JDE or interfaces with other SW, please provide details such as how many locations....etc). In addition, please document the customer advantages of using Cloud over on premise and any future Cloud plans the customer may support.

If you have been in a compete position for Oracle IaaS against other IaaS providers (Amazon, Microsoft, Private Cloud / Hosting providers), please identify what made the client decide to use Oracle Public Cloud.

You can enter up to 8 examples in this document for this category. If you need addition pages, start a new form.

Customer - 1

Customer Name:		Annual Revenue:	
		Win Date:	
		Release:	
		Industry:	
		Customer Locations:	

Description of Customer (what their business is):	
Simple on premises HW and SW architecture schema (interfaces with other SW, how many locations....etc):	
What was their JD Edwards footprint on premises:	
What they have decided to implement in Cloud:	
Cloud over on-premises advantages for the customer:	
What were the steps taken by the customer to decide to movie to cloud:	
If you have been in a compete position for Oracle IaaS against other IaaS providers (Amazon, Microsoft, Private Cloud / Hosting providers) what made the client decide for OPC.	
Other information:	

Customer - 2

Customer Name:		Annual Revenue:	
		Win Date:
